Assessment Brief – Coursework

Key information

Academic Year	**2025-2026**
Semester	**2**
Module Code	**CMM007**
Module Title	**Intranet Systems Development**
Assessment Description	**Coursework**
Deadline (date & time)	**16th April 2026 – 1pm** **Feedback will be given through CampusMoodle in 20 working days after the submission deadline**
Submission	**Assessment Dropbox in the Module Study Area in Moodle**
Word Limit	**15-minute video recording**
Use of Generative Artificial Intelligence (Gen AI) **See** Student Guidance on the use of AI	1 **No AI** ☐ 2 **Ideas** ☑ 3 **Editing** ☑ 4 **Tasks** ☐ 5 **Full AI** ☐
Module Coordinator	**Janaka Senanayake**

What knowledge and/or skills will I develop by undertaking the assessment?

This assessment aims to enable students to design and develop interactive applications while evaluating their functionality, effectiveness, efficiency, and security.

On successful completion of the assessment students will be able to achieve the following Learning Outcomes:

1. Design and implement a dynamic web application from a set of created requirements.
2. Demonstrate the ability to secure and perform simple penetration testing on a web application.
3. Identify and describe technologies that are used within a client/server-side web application.
4. Understand the concepts needed to create large-scale web applications.

Please also refer to the Module Descriptor, available from the module Moodle study area.

What is expected of me in this assessment?

Task(s) – content

This assessment is an individual exercise; you are not permitted to collaborate or collude with other students. The deliverables of the coursework include:

1. ***A 15-minute recorded presentation.***
2. ***A text file containing the link of the GitHub repository containing the developed web application.***

Objective

You have been tasked with developing a web-based equipment rental management system designed to efficiently manage equipment inventory and users to rent and return equipment, providing a seamless experience for both administrators and users. The system will include features for managing user accounts and equipment inventory. There are two user roles: 1) Admin – responsible for managing equipment inventory and user accounts, and 2) User – able to search for, rent, and return equipment. The system's three core features are: 1) a login system with role-based access, 2) CRUD operations (Create, Read, Update, Delete) for equipment and user accounts, and 3) functionality for equipment rent and returns.

Modules and Interfaces

There are four modules required to develop in this system as follows which highlights interfaces/ features of each. Additionally, you have to develop a suitable database using MySQL.

1. **Login Module**
   - Interface:
     - Username and Password fields.
     - Dropdown to select user role (Admin/User).
     - Login button.
   - Features:
     - Authentication using credentials.
     - Redirect to admin dashboard or user dashboard based on role.
2. **Admin Dashboard**
   - Interfaces:
     - Equipment Management:
       - Add Equipment: Form to input equipment details (e.g., name, category, serial number, condition, quantity).
       - Update/Delete Equipment: Editable table displaying equipment with options to edit or delete.
     - User Management:
       - Add User: Form to register new users (name, email, role, etc.).
       - Update/Delete User: Editable table displaying users with options to edit or delete.
3. **User Dashboard**
   - Interfaces:
     - Search & Rent Equipment:
       - Search bar with filters (e.g., name, category, condition).
       - List of available equipment with a "Rent" button.
     - Rental Management:
       - View rented equipment with due dates.

- Return rented equipment.

4. Equipment Rental and Return Module

- Features:
  - Rent: Reduce the available quantity when a user rents an item.
  - Return: Increase available quantity and update the rental record.
  - Restrictions: Limit the number of items a user can rent and track overdue returns.

User Stories

- Admin:
  - As an admin, I want to add new equipment to the inventory so that users can rent it.
  - As an admin, I want to update equipment details to maintain accurate records.
  - As an admin, I want to manage user accounts to control system access.
- User:
  - As a user, I want to search for equipment by name or category to find the tools I need.
  - As a user, I want to rent equipment for a specific duration.
  - As a user, I want to return rented equipment and check my rental history.

Expected Outcome of the System

A functional web-based equipment rental management system with the following features:

- Secure login for admins and users.
- Admin capabilities to manage equipment inventory
- User capabilities to search, rent, and return equipment.
- Real-time updates on equipment availability and rental history.
- The appropriate database to handle the data.

You are encouraged to include additional functionality beyond the core functions described above, and you may use third-party libraries provided that you acknowledge and reference them properly. Additionally, you should thoroughly test your application.

Please note that the aim of using of AI tools within any module is to provide extra support for learning, NOT to give an opportunity to AVOID learning. It is a mistaken strategy to use AI as a substitute for being able to demonstrate the relevant competencies in the subject area. It may be that you pass one assessment (if you manage to avoid the AI detection tools, as well as

other academic integrity tests that are put in place), but you will almost certainly fail the next assessment in this subject area, since that will assume knowledge and skills gained in the current module as a prerequisite. Any misuse of such tools (such as excessive use and/or non-disclosure) will lead to possible academic misconduct proceedings and penalties placed on the overall module grade.

Generative AI may be used for ideation and design, including planning methodologies, preliminary analysis of datasets, and reference-based code lookups. Editing, including identification and resolution of code errors, as well as spelling and grammar checks.

Generative AI must not be used to generate, in whole or in part, responses to coursework tasks that are submitted as the student's own work.

All presentations must end with a slide with a declaration describing the use of Generative AI, using the following format: "Generative AI was/was not used to support the completion of this assessment. If used: The GenAI tool [tool name] was used for the purpose of [ideation and/or editing], and these are some of the main prompts used: [prompts]

Task(s) – format

1. Video Recording:
    a. Submit a 15-minute video demonstrating the system.
    b. Allocate the first 10 minutes of the presentation to showcasing the system's capabilities and database design.
    c. Dedicate the remaining 5 minutes to discussing the system's limitations (e.g. in functionality, scalability or security) and potential enhancements with recommendations.
    d. Upload the recording as an MP4 file to the submission Dropbox on the Moodle page. If the file size exceeds the limit, upload the video to your OneDrive, include the link in a text file, and upload the text file instead. Ensure the video permissions are set so that anyone with the link can view.
    e. You may use any recording tool of your choice (e.g., Teams, Zoom, PowerPoint, etc.).
    f. Ensure that your face is visible throughout the recording.

2. Source Code:
   a. Upload your website's source code files to a GitHub repository. Include the repository link in a text file and upload the text file to the submission Dropbox.

How will I be graded?

A grade will be provided for each criterion on the feedback grid, which is specific to the assessment. The overall grade for the assessment will be calculated using the algorithm below*.	
A	At least 50% of the feedback grid to be at Grade A, at least 75% of the feedback grid to be at Grade B or better, and normally 100% of the feedback grid to be at Grade C or better.
B	At least 50% of the feedback grid to be at Grade B or better, at least 75% of the feedback grid to be at Grade C or better, and normally 100% of the feedback grid to be at Grade D or better.
C	At least 50% of the feedback grid is to be at Grade C or better, and at least 75% of the feedback grid is to be at Grade D or better.
D	At least 50% of the feedback grid to be at Grade D or better, and at least 75% of the feedback grid to be at Grade E or better.
E	At least 50% of the feedback grid is to be at Grade E or better.
F	Failing to achieve at least 50% of the feedback grid to be at Grade E or better.
NS	Non-submission.

* If the duration of the presentation is above the specified duration by more than 10%, the grade for the submission will be reduced to the next lowest grade.

Feedback Grid

GRADE	A	B	C	D	E	F
DEFINITION/ CRITERIA (WEIGHTING)	**EXCELLENT** Outstanding Performance	**COMMENDABLE/VERY GOOD** Meritorious Performance	**GOOD** Highly Competent Performance	**SATISFACTORY** Competent Performance	**BORDERLINE FAIL**	**UNSATISFACTORY** Fail
Web Application Design (30%) **Grade:**	The implemented site features a modern design that suits the proposed use cases. Page transitions are excellently implemented, and the user path is clear. Excellent database design.	The site features a well-designed layout that suits the use cases. Page transitions are good, and the user path is clear. Very good database design.	The site design accommodates most of the proposed use cases. Page transitions are adequate, and navigation is not always clear. The database design of good, but it contains minor issues.	The site design does not fully cover the use cases. Navigation is unclear, and there is no coherent user path through the site. Designing of the database is satisfactory but contains major issues.	The site design does not reflect the use cases, and its use is impeded by the poor design. User path is unclear and incoherent. Database design is poor.	The site design does not reflect the use cases, and use is impeded by very poor design, or it was not designed at all. The user path is unclear and incoherent. Database design is very poor.
Web Application Development and Functionality (40%) **Grade:**	The site has been excellently implemented, providing all the required functionality, but also includes additional functionality. The site functions flawlessly and has undergone thorough testing. Extra features have been included and are both appropriate and well thought out. The GitHub repository contains the source code of the fully functional website.	The site has been excellently implemented, providing all the required functionality. The site functions flawlessly and passes tests, but it contains minor issues. Extra features have been included and are appropriate, but can be improved. The GitHub repository contains the source code of the functional website but presents some minor issues.	The site has been implemented to a high level of detail, providing many of the required functionalities. The site functions at a satisfactory level and has been thoroughly tested, but it still contains some issues. Extra features have been included and are somewhat appropriate, and can be improved. The GitHub repository contains the source code of	The site has been implemented to a satisfactory level, providing some of the required functionality. The site functions satisfactorily but contains some major issues. Additional features have been included, but they are not particularly suitable. The GitHub repository contains the source code of the functional website, but presents major issues.	Poor implementation of the site and the required functionality are not implemented. The site is not functioning well or contains many major issues. Extra features have not been included, or they are not appropriate at all. The GitHub repository contains a website which is not functioning well.	The site has not been implemented, or the implementation is very poor. The site is not functioning at all. No extra features. The GitHub repository is missing, or it does not contain the proper website.

GRADE	A	B	C	D	E	F
DEFINITION/ CRITERIA (WEIGHTING)	**EXCELLENT** Outstanding Performance	**COMMENDABLE/VERY GOOD** Meritorious Performance	**GOOD** Highly Competent Performance	**SATISFACTORY** Competent Performance	**BORDERLINE FAIL**	**UNSATISFACTORY** Fail
			the functional website, but presents some issues.			
Limitations and Recommendations (20%) **Grade:**	Excellent analysis of limitations. Excellent discussion, with a clear and informed exploration of opportunities and alternatives, and justified recommendations.	Very good analysis of limitations. A very good discussion, with a largely clear and informed discussion of opportunities and alternatives, and justified recommendations.	Good analysis of limitations. Good discussion with mostly clear and informed discussion of opportunities and alternatives, accompanied by justified recommendations.	Satisfactory analysis of limitations. A satisfactory discussion should be conducted, with clarity and an informed discussion of opportunities and alternatives justified.	Poor analysis of limitations. Poor discussion, but clarity and an informed discussion of opportunities and alternatives should be justified.	Very poor analysis of limitations. There is a lack of clarity and discussion, and an informed discussion of opportunities and alternatives is not presented.
Professionalism and Presentation (10%) **Grade:**	Professional and excellent presentation, easy to follow. Provides excellent reference to industry standards/ professional documents/ white papers/ research articles. Excellent time management.	Professional and very good presentation, easy to follow. Provides adequate reference to industry standards/ professional documents/ white papers/ research articles. Very good time management.	Good presentation, somewhat easy to follow. Provides limited reference to industry standards/ professional documents/ white papers/ research articles. Fairly good time management.	Satisfactory presentation, somewhat difficult to follow. Provides very limited reference to industry standards/ professional documents/ white papers/ research articles. Lack of time management.	The presentation is difficult to follow. No reference to industry standards/ professional documents/ white papers/ research articles. Poor time management.	Presentation is not up to a satisfactory level. Contains many issues in the presentation. Very poor time management.

Coursework received late, without valid reason, will be regarded as a non-submission (NS) and one of your assessment opportunities will be lost.

What else is important to my assessment?

What is the Assessment Word Limit Statement?

It is important that you adhere to the Word Limit specified above. The Assessment Word Limit Statement can be found in Appendix 3 of the RGU Assessment Policy. It provides detail on the purpose, setting and implementation of wordage limits; lists what is included and excluded from the word count; and the penalty for exceeding the word count.

What's included in the word count?

The table below lists the constituent parts which are included and excluded from the word limit of a Coursework; more detail can be found in the full Assessment Word Limit Statement. Images will not be allowed as a mechanism to circumvent the word count.

Excluded	Included
• Cover or Title Page • Executive Summary (Reports) or Abstract • Contents Page • List of Abbreviations / Acronyms • List of Tables / Figures • Tables – mainly numeric content • Figures • Reference List and/or Bibliography • Appendices • Glossary	• Main Text e.g. Introduction, Literature Review, Methodology, Results, Discussion, Analysis, Conclusions, and Recommendations • Headings and subheadings • In-text citations • Footnotes (relating to in-text footnote numbers) • Quotes and quotations written within "…" • Tables – mainly text content

What are the penalties?

The grade for the submission will be reduced to the next lowest grade if:

- The word count of the submission is above the specified word limit by more than 10%.
- The submission contains an excessive use of text within Tables or Footnotes.

What are the categories of Gen AI use?

The table below describes the different categories of Gen AI use in assessment.

Category	Description *
1 **No AI**	Gen AI use is not authorised. • You must not use Gen AI at any point to complete the assessment.
2 **Ideas**	You may use Gen AI to plan, research and generate ideas for the content and structure, or on how to improve the work. • This may be optional or a requirement of the assessment. • No Gen AI content is allowed in the final submission.
3 **Editing**	You may use Gen AI to improve the communication and appearance of your work, i.e. to refine, edit and enhance the language or presentation of the original work (e.g. proofreading; image editing). • This may be optional or a requirement of the assessment. • No new content can be created. • English is the language of assessment at RGU, therefore submitted work must not include text produced using translation tools (false authorship).
4 **Tasks**	You can use Gen AI to complete certain elements of the assessment task. • This may be optional or a requirement of the assessment.
5 **Full AI**	You can use Gen AI throughout the assessment. • This may be optional or a requirement of the assessment. • English is the language of assessment at RGU, therefore submitted work must not include text produced using translation tools (false authorship).

* For all categories, please see the Academic Integrity in Practice resource which contains guidance on Document Control for maintaining academic integrity.

Citing and referencing use of Gen AI

RGU Library has guidance for citing and referencing use of Gen AI in the style of Harvard, Vancouver, APA and OSCOLA.

Acknowledging use of Gen AI

If you have to acknowledge Gen AI use, you can use this template unless otherwise specified:

> "I acknowledge use of [insert name of Gen AI tool(s)] from [url of Gen AI tool(s)] to [insert statement summarising use]. I entered the following prompts on [insert date]: [insert prompts] and [insert description of how the generated content was used]."

Academic Integrity

For information on academic integrity, please see the Moodle page Academic Integrity and the resource Academic Integrity in Practice which contains guidance on Document Control for maintaining academic integrity. Categories of academic misconduct are defined in RGU Academic Regulation A3-2 Student Conduct Procedure and include the definitions below.

What is false authorship?

"The University defines this as the practice of submitting work where the student is not the author of that work. The 'false authorship' may relate to the student engaging with a third party and/or software tool to complete an assessment, either in part or whole. This may include work produced by, but not attributed to: another student, an essay mill, a family member or friend, a tutoring service or the unauthorised use of Artificial Intelligence (AI) software. It may also include payment, or other favours, though this will not always be the case. It may relate to any form of assessment or conducting research".

What is plagiarism?

Plagiarism is "the practice of presenting the thoughts, writings or other output of another or others as original, without acknowledgement of their source(s) at the point of their use in the student's work. All materials including text, data, diagrams or other illustrations used to support a piece of work, whether from a printed publication or from electronic media, should be appropriately identified and referenced and should not normally be copied directly unless as an acknowledged quotation. Text, opinions or ideas translated into the words of the individual student should in all cases acknowledge the original source".

What is collusion?

Collusion is defined as “two or more students working together, without the prior authorisation of the Course Leader, tutor or supervisor, to produce the same piece of work, and then attempting to present this work as their own”.

What if I’m unable to submit?

- The University operates a Fit to Sit Policy which means that if you undertake an assessment then you are declaring yourself well enough to do so.
- If you require an extension, you should complete and submit a Coursework Extension Form. This form is available on the RGU Student and Applicant Forms page.
- Further support is available from your Course Leader.

What additional support is available?

- RGU Study Skills provide advice and guidance on academic writing, study skills, maths and statistics and basic IT.
- RGU Library guidance on referencing and citing.
- The Inclusion Centre: Disability & Dyslexia.
- Your Module Coordinator, Course Leader and Personal Tutor can also provide support.

What are the University rules on assessment?

The University Regulation ‘A4: Assessment and Recommendations of Assessment Boards‘ sets out important information about assessment and how it is conducted across the University.
